

# Renewable Energy

## Across

- 4. - Power extracted from Earth's internal heat
- 6. - Energy produced from flowing water
- 9. - Energy captured from the motion of ocean waves
- 10. - Capable of being maintained over the long term
- 11. - Energy harnessed from the sun
- 12. - Clean fuel produced from renewable sources
- 13. - Energy derived from organic materials
- 14. - Technology converting sunlight directly into electricity
- 16. - Renewable fuel derived from biological sources
- 17. - Collection of wind turbines

## Down

- 1. - System combining different renewable energy sources
- 2. - Energy sources that are replenished naturally
- 3. - Localized energy system connected to the main grid
- 5. - Device converting the energy from moving fluids into mechanical energy
- 7. - Producing no net release of carbon dioxide
- 8. - Capacity to be replaced by natural processes
- 10. - Device converting sunlight into electrical energy
- 15. - Power generated by harnessing the movement of air
